- 65% government assisted
- Transients
- Established loyal patients
- Hispanic
 - Close knit families
 - Traditional gender roles
 - Spiritual
 - Family decision making
 - Traditional
 - Modest and Private
 - Gender issues
 - Preventative Care

Maryvale Hospital acts as a ROOT: an underlying anchor to the community which provides a lifeline to its patients and continued sustenance through wellness and education.

Sustainable Health

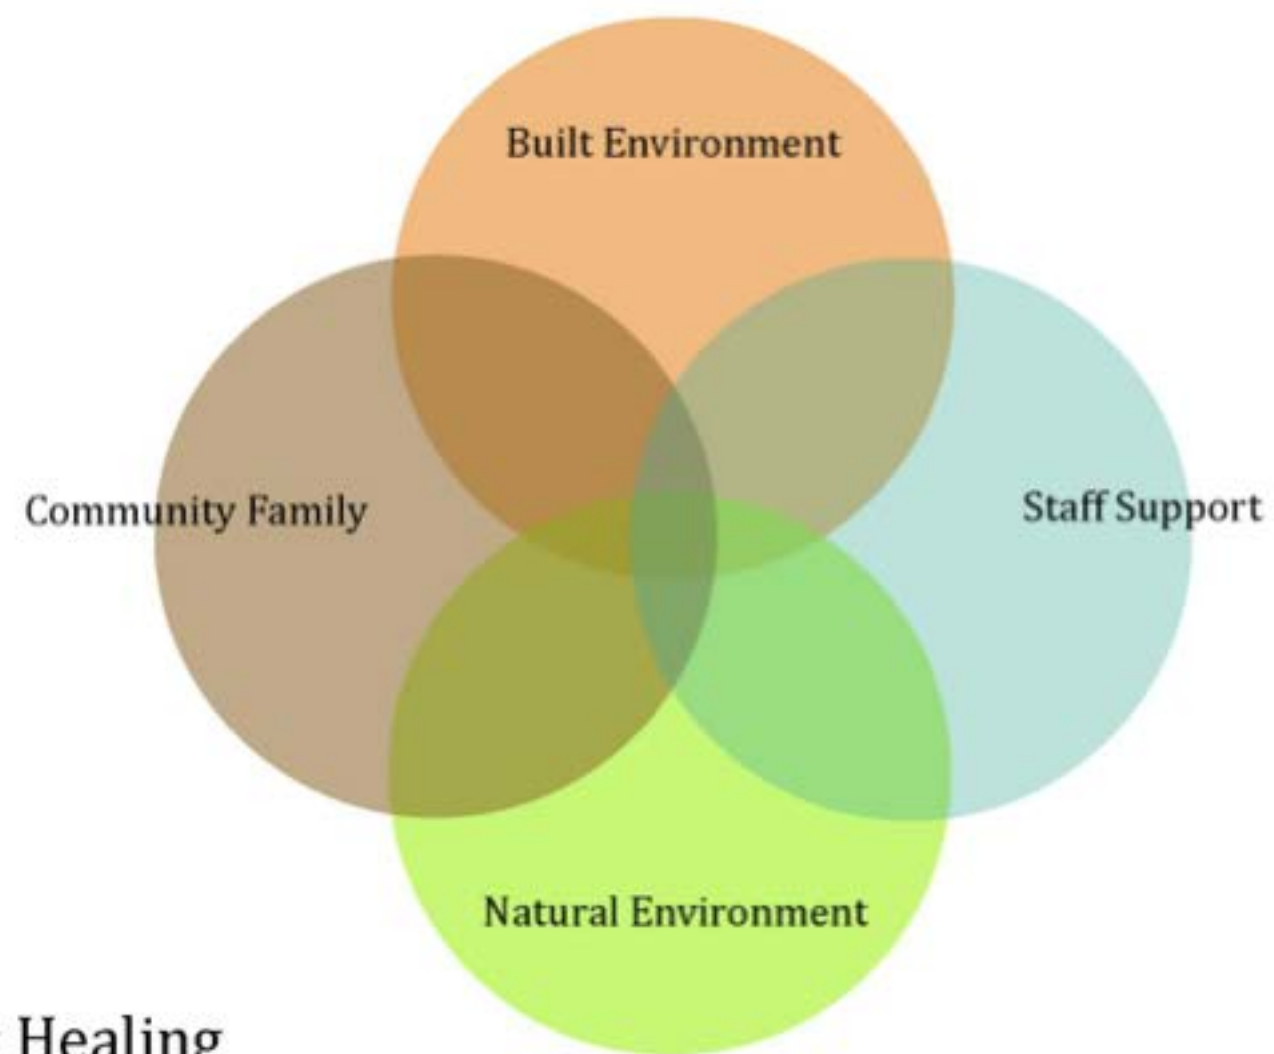

- Live for health rather than surviving illness.
- Simplify techniques and procedures and adapt them efficiently.
- Offer modest, but high quality care that meet basic human needs of health: primary and preventative care, nutrition, and family planning so that individuals may become active agents of their own health.
- Incorporate traditional, local health measures and indigenous science familiar with the community alongside technologically appropriate measures.

- Devote energy into understanding and cooperating with the community context in a meaningful way.
- Educate about Hispanic culture and language and engage in community service.
- Implement demographic and evidence based design.
- Decentralized charting stations bring caregivers to patient

Staff Support

Holistic Healing

Hospitals are major consumers of energy and natural resources. Therefore, Maryvale hospital has the responsibility to be a wise steward of scarce resources by reducing the use of non-renewable resources and increasing energy efficiency. Maryvale hospital is also committed to using the healthiest of building materials and building practices for renovation and new construction.

The background of the slide features a soft, painterly illustration. It depicts two hands, one from a darker-skinned person and one from a lighter-skinned person, gently cupping a plant. The plant has thick, gnarled roots extending downwards and several large, rounded, yellowish-green leaves growing upwards. The overall color palette is muted and earthy, with greens, yellows, and skin tones. The text is overlaid on this background.

Sustainable Focus

Community Connectivity

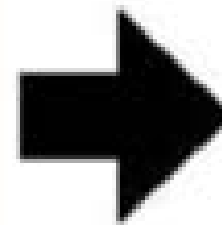

- Hospital rooted in community, rooted in natural environment
- Hospital, library, & park connection = Maryvale landmark
- Park events for sustainable and cultural awareness
- Organic, spontaneous, and engaging

Other Unique Ideas

- Using tiles from local artisans and designs from local schools
- Implementing a recycling program

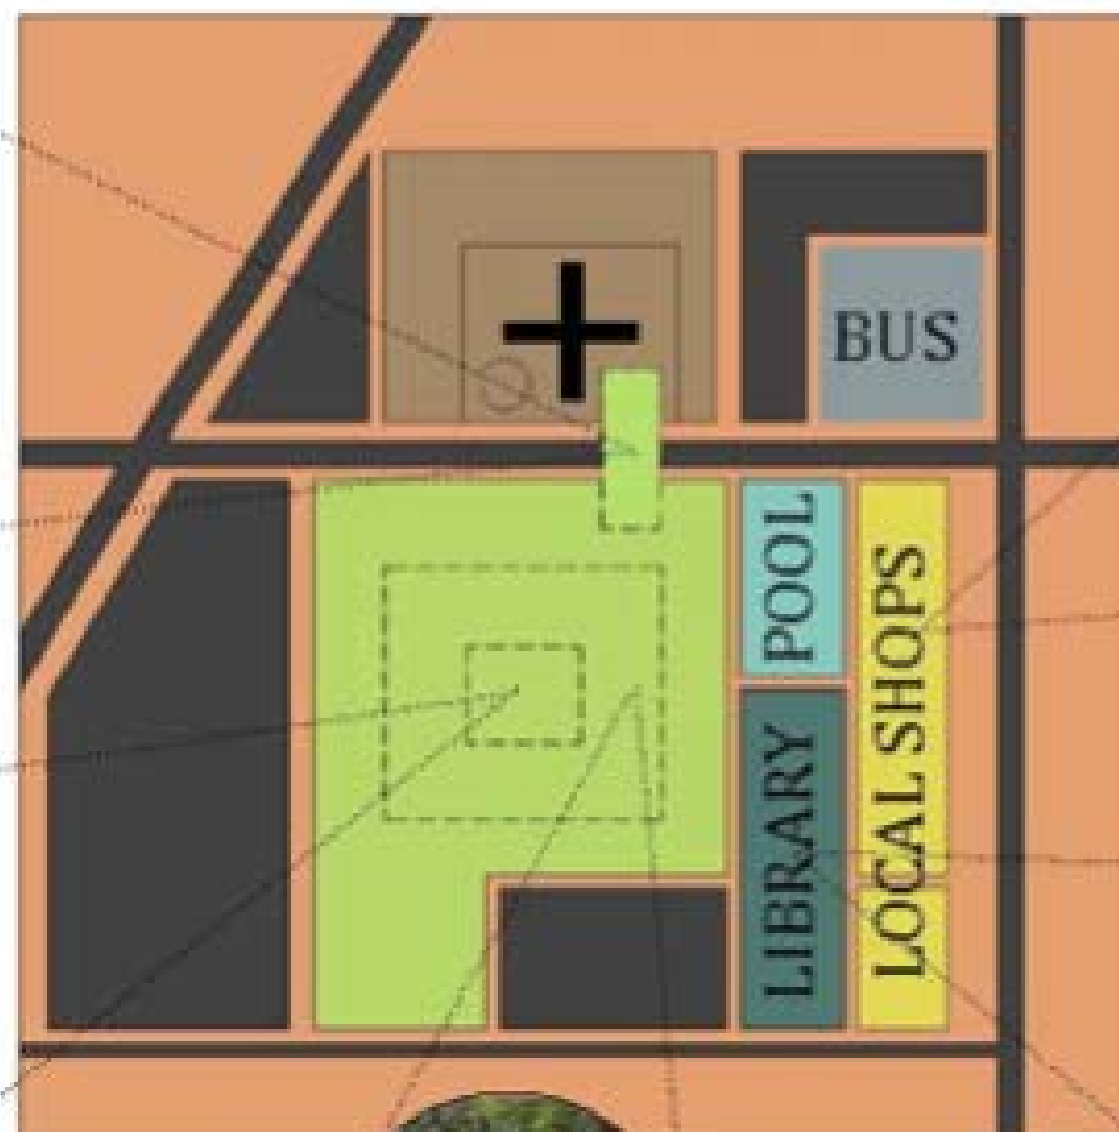

Existing

Proposed

Community Connectivity

Retain staff.	Flexible modules, private, relaxing staff offices with courtyards, secondary staff break area, sleeping quarters
Provide efficient primary care.	Flexible modules allow for efficiency and various procedures to be done in one room, decentralized charting & support, modular systems
Acknowledge family importance.	Large private treatment rooms, secondary family waiting area and family courtyard
Deinstitutionalize sterile aesthetic.	Humble and familiar environment, warm and relaxing aesthetic connected to private and public garden courtyards with ample light
Provide safety and security.	Security station at both entrances, wireless security pagers, and secure iso/pysch rooms

Design Challenge

Flexible Modules

- Patient
- Staff
- Family
- Courtyards

- 28 flexible exam rooms w/ 6 private bathrooms
- 7 fast track rooms
- 3 pediatric rooms

- Isolation/Psych Unit
- 2 Security stations
- 3 central nurse stations & decentralized charting and support

- Family courtyard & family lounge
- Staff courtyard & staff break room
- Views to nature and light shafts

Patient Flow
